

GEM performance: Cluster-finding

Update (06/12/2020)

by Ishara Fernando

Comparison between Average Charge and Geometric Charge

Also let's order the clusters according to the “charge” instead of “weight”

$$\text{Average Charge} = \frac{1}{2} \sum_{i=x_{chan}-4, j=y_{chan}-4}^{i=x_{chan}+4, j=y_{chan}+4} (\text{ADC}_{x_{chan}} + \text{ADC}_{y_{chan}})$$

$$\text{Geometric Charge} = \sum_{i=x_{chan}-4, j=y_{chan}-4}^{i=x_{chan}+4, j=y_{chan}+4} \sqrt{(\text{ADC}_{x_{chan}} * \text{ADC}_{y_{chan}})}$$
